Accounting for Profit for Breach of Contract-Katy Barnett 2012-05-31 This book defends the view that an award of an account of profits (or 'disgorgement damages') for breach of contract will sometimes be justifiable, and fits within the orthodox principles and cases in contract law. However there is some confusion as to when such an award should be made. The moral bases for disgorgement damages are deterrence and punishment, which shape the remedy in important ways. Courts are also concerned with vindication of the claimant's performance interest, and it is pivotal in these cases that the claimant cannot procure a substitute performance via an award of damages or specific relief. The book argues that disgorgement damages should be available in two categories of case: 'second sale' cases, where the defendant breaches his contract with the claimant to make a more profitable contract with a third party; and 'agency problem' cases, where the defendant promises the claimant he will not do a certain thing, and the claimant finds it difficult to supervise the performance. Moreover, disgorgement may be full or partial, and 'reasonable fee damages' for breach of contract are best understood as partial disgorgement rather than 'restitutionary damages'. Equitable bars to relief should also be adopted in relation to disgorgement damages, as should allowances for skill and effort. This book will be of interest to contract and commercial lawyers, and will be especially valuable to anyone with an interest in contract remedies and restitution. It draws on case law in a number of common law jurisdictions, primarily England and Wales, and Australia.

The media has pounced on their story and the girls are caught up in a flurry of talk-show appearances and newspaper interviews. They've put on a happy public face, but someone is leaking their true feelings to the press, and while it seems like the world is watching their every move, at least they have each other. But with cotillion season right around the corner, Izzie and Mira have barely had time to process their newfound sisterhood. Mira has dreamed of making her debut in a gorgeous white gown forever-now, if only she could find an escort. Izzie, meanwhile, is still struggling to find her place in Emerald Cove and it's seeming ever more impossible with EC mean-girls, young and old, doing their best to keep her down. The Civilized Engineer-Samuel C. Florman 2014-04-22 Civil engineer Samuel C. Florman's The Civilized Engineer is aimed at both those observing and commenting externally on engineering, and the practicing engineer—to reveal something of the art behind great engineering achievements, and to stimulate debate upon the author's hypothesis that "in its moment of ascendance, engineering is faced with the trivialization of its purpose and the debasement of its practice."

Engineering and the Mind's Eye-Eugene S. Ferguson 1992 The things that engineers design are everywhere, and the influence that engineers have on daily life is far out of proportion to their numbers. In this expanded version of a remarkable essay published in Science more than a decade ago, Eugene Ferguson takes a probing look at the process of engineering design, arguing that despite modern technical advances, good engineering is still as much a matter of intuition and nonverbal thinking as of equations and computation. Ferguson, who has been successively a mechanical engineer, a technical museum curator, and a teacher of the history of technology, uses examples ranging from the development of the American axe to the collapse of the Hartford Coliseum and the performance of the Hubble space telescope to illustrate the ways in which visual thinking enriches engineering and the ways in which engineering that relies solely on technical sophistication can go wrong. He argues that a system of engineering education that ignores this heritage of nonverbal thinking will produce engineers who are dangerously ignorant of the many ways in which the real world differs from the mathematical models constructed in academic minds. In Engineering and the Mind's Eye, Ferguson discusses the nature of engineering design and traces the development of visual and other nonverbal thinking, offering examples of how engineers and other technologists have used such strategies since the Renaissance. Accompanying these examples, and demonstrating the ways in which engineers have shared their knowledge, is a parallel text of illustrations showing how visual thinking has been expressed over the past five centuries. Ferguson concludes his provocative account by arguing that engineering education since 1945 has been skewed toward analytical techniques - which are easiest to teach and evaluate - and away from the art of engineering design as taught by experienced engineers. Eugene Ferguson is Professor of History Emeritus at the University of Delaware.

Algorithmic Cryptanalysis-Antoine Joux 2009-06-15 Illustrating the power of algorithms, Algorithmic Cryptanalysis describes algorithmic methods with cryptographically relevant examples. Focusing on both private- and public-key cryptographic algorithms, it presents each algorithm either as a textual description, in pseudo-code, or in a C code program. Divided into three parts, the book begins with a short introduction to cryptography and a background chapter on elementary number theory and algebra. It then moves on to algorithms, with each chapter in this section dedicated to a single topic and often illustrated with simple cryptographic applications. The

final part addresses more sophisticated cryptographic applications, including LFSR-based stream ciphers and index calculus methods. Accounting for the impact of current computer architectures, this book explores the algorithmic and implementation aspects of cryptanalysis methods. It can serve as a handbook of algorithmic methods for cryptographers as well as a textbook for undergraduate and graduate courses on cryptanalysis and cryptography.

Fires in the Middle School Bathroom-Kathleen Cushman 2009-09-08 Following on the heels of the bestselling Fires in the Bathroom, which brought the insights of high school students to teachers and parents, Kathleen Cushman now turns her attention to the crucial and challenging middle grades, joining forces with adolescent psychologist Laura Rogers. As teachers, counselors, and parents cope with the roller coaster of early adolescence, too few stop to ask students what they think about these critical years. Here, middle school students in grades 5 through 8 across the country and from diverse ethnic backgrounds offer insights on what it takes to make classrooms more effective and how to forge stronger relationships between young adolescents and adults. Students tackle such critical topics as social, emotional, and academic pressures; classroom behavior; organization; and preparing for high school. Cushman and Rogers help readers hear and understand the vital messages about adolescent learning that come through in what these students say. This invaluable resource provides a unique window into how middle school students think, feel, and learn, bringing their needs to the forefront of the conversation about education.

Army Terminal Operations-Department of the Army 1996-04-15 This FM deals with Army terminal operations in a TO. It contains procedures and techniques to plan, use, and control Army water, motor, rail, and air terminal operations. It explains the transportation doctrine and organizational structures needed to deploy Army terminal operations in a TO. It covers roles, missions, and concepts of employment for terminal operation units. This manual is mainly for unit commanders, key personnel, higher HQ staffs, theater planners, and commanders of operational allied units. Terminals are key nodes in the total distribution system that support the commander's concept of operation at all levels of war and through the range of military operations. They provide loading, unloading, and handling of cargo and personnel between various transportation modes. When linked by modes of transport, they define the transportation structure for the operation. Force projection missions require early identification and establishment of terminals. A well-conceived plan assures that terminals can support the deployment, reception, and onward movement of the force and its sustainment. Crucial to the execution of the operation is the assignment of the right personnel, cargo, and material handling equipment at each terminal. ITV of material moving through the transportation system also provides the CINC with information pertaining to location and final destination of all cargo. The Army is required to function across a range of operation from peacetime through conflict to war (see FM 100-5). Terminal operators must be able to operate in every TO. Terminals will be vulnerable to air and missile attacks, especially if US and allied forces have not established air superiority and sea control. They may also be subject to attacks by unconventional forces and to sabotage, terrorism, mining, espionage, and chemical or biological attacks. Whatever the level of the Army operation, terminals will remain a critical piece to ensure continuous movement of personnel and cargo.
